Report of School Committee.

The year has been a prosperous one in our school work. In several instances plans have been broken up and the best results prevented by sickness, but for the most part no special disturbances have been suffered. The teachers have generally labored with commendable faithfulness, and our young people have made a notable advance "all along the line." The last of the battered wrecks, which have been dignified by the name of school houses, has given place to the neat and convenient structure erected by the citizens of District No. 7., Every school house in town has been built, or thoroughly repaired, within a comparatively brief term of years. Several have been badly abused, but most have been well preserved, and we have several school rooms that are really beautiful and elegant. All who are interested, (and who is not) are to be congratulated.

The "Fish-Robinson, Shorter Course in Arithmetic" books have been introduced in place of Robinsons' old series. We venture a few general remarks in this connection. Many works on arithmetic, especially the older publications, abound with principles and problems for which there is very rarely or never any use in practical life. Scholars who go from the district school to pursue extensive courses of study in higher institutions of learning have no time to spare now from their labor of acquiring what is essential to fit them for the places they wish to occupy in higher classes. Such always regret time spent in learning what proved to be of no use to them.

Scholars who get their whole education in the district school, have still greater need of discriminating between the abstract and the practical, and of practicing economy in the expenditure of time. An effort to save valuable time, by shortening the course in arithmetic, has been made by several others of late, and with this effort your committee is in sympathy.

Reports of the several schools with the usual statistics are appended.
